From Wikipedia, the free encyclopedia

Respublika (Russian: Республика – деловое оброжение) or **Golos Respubliki** (Voice of the Republic) was a weekly Russian-language Kazakhstani newspaper. Founded by Irina Petrushova in 2000, the paper is known for its reporting on government corruption. It was ordered to closure in 2002 and in May 2005 by the Ministry of Culture, Information and Sports,^[1] but continued to publish under a variety of titles.^[2] In late 2012, before the anniversary of the Mangystau riots, Kazakhstani authorities raided and searched *Respublika*'s office and again suspended its publication, pending a verdict on criminal charges.^{[3][4]}

History [edit]

Russian journalist Irina Petrushova founded *Respublika* in 2000. The weekly focused on covering business and economic issues in Kazakhstan, and frequently published stories highly critical of Nazarbayev's regime. The paper wrote about financial scandals and rampant nepotism and cronyism. Scandals the paper exposed included the granting of oil rights to one of Nazarbayev's relatives; the disappearance of funds for an airport in the capital, Almaty; and the Kazakhstani police forcing tourists off a plane so that Nazarbayev's daughter might fly alone.^{[5][6]} *Respublika*'s most notable story was an exposé which revealed that Nazarbayev had stashed US\$1 billion of the state's oil revenues in a Swiss bank account; the government stated that this had been an emergency fund used to rescue the national economy in 1998.^[5]

In November 2001, a government representative unsuccessfully attempted to buy a controlling stake in *Respublika*. In January 2002, Kazakhstani printers began to refuse to print the paper, one after a human skull was placed on his doorstep.^[5]

The screenshot shows a web browser window with the title "Index of /ram/users/pws - Iceweasel". The address bar displays "axroot.com/ram/users/pws/". The browser's tab bar shows three tabs: "Restore Session", "Index of /ram/users/p...", and "Connecting...". The browser's toolbar includes a search bar and various navigation icons. Below the toolbar, a "Most Visited" section lists several links: "Offensive Security", "Kali Linux", "Kali Docs", "Kali Tools", "Exploit-DB", and "Aircrack-ng".

Dark Caracal - Pallas

Pallas

- **Secure messaging**
 - Threema, Signal, WhatsApp, Primo, Plus Messenger
- **Privacy / Connectivity**
 - Orbot, Psiphon
- **Miscellaneous**
 - Flash Player, Google Play Push
- **Most are fully functional**

Pallas

- Take photos with front or back camera
- Intercept incoming text messages and exfiltrate
- Retrieve latitude / longitude from GPS
- Silently record audio with device microphone
- Retrieve contacts
- Scan nearby WIFI access points and exfiltrate information about them; including their BSSID, SSID, authentication, key management, encryption schemes, signal strength, and frequency

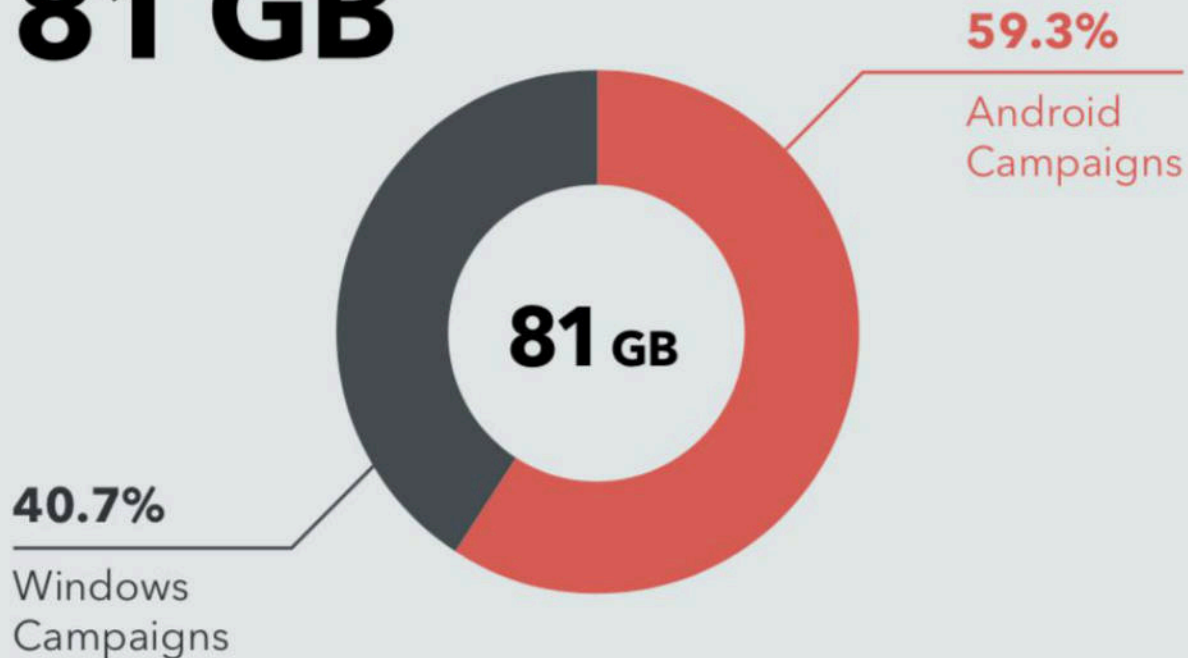

EXFILTRATE

ALL THE THINGS!

- Retrieve device metadata
- Retrieve text messages
- Retrieve information about all accounts
- Send an SMS to an attacker specified number
- Retrieve call logs
- Retrieve messages and any corresponding decryption keys from messaging apps
- Retrieve a list of installed packages
- Download and install additional apps
- Upload attacker specified files
- Delete attacker specified files and directories

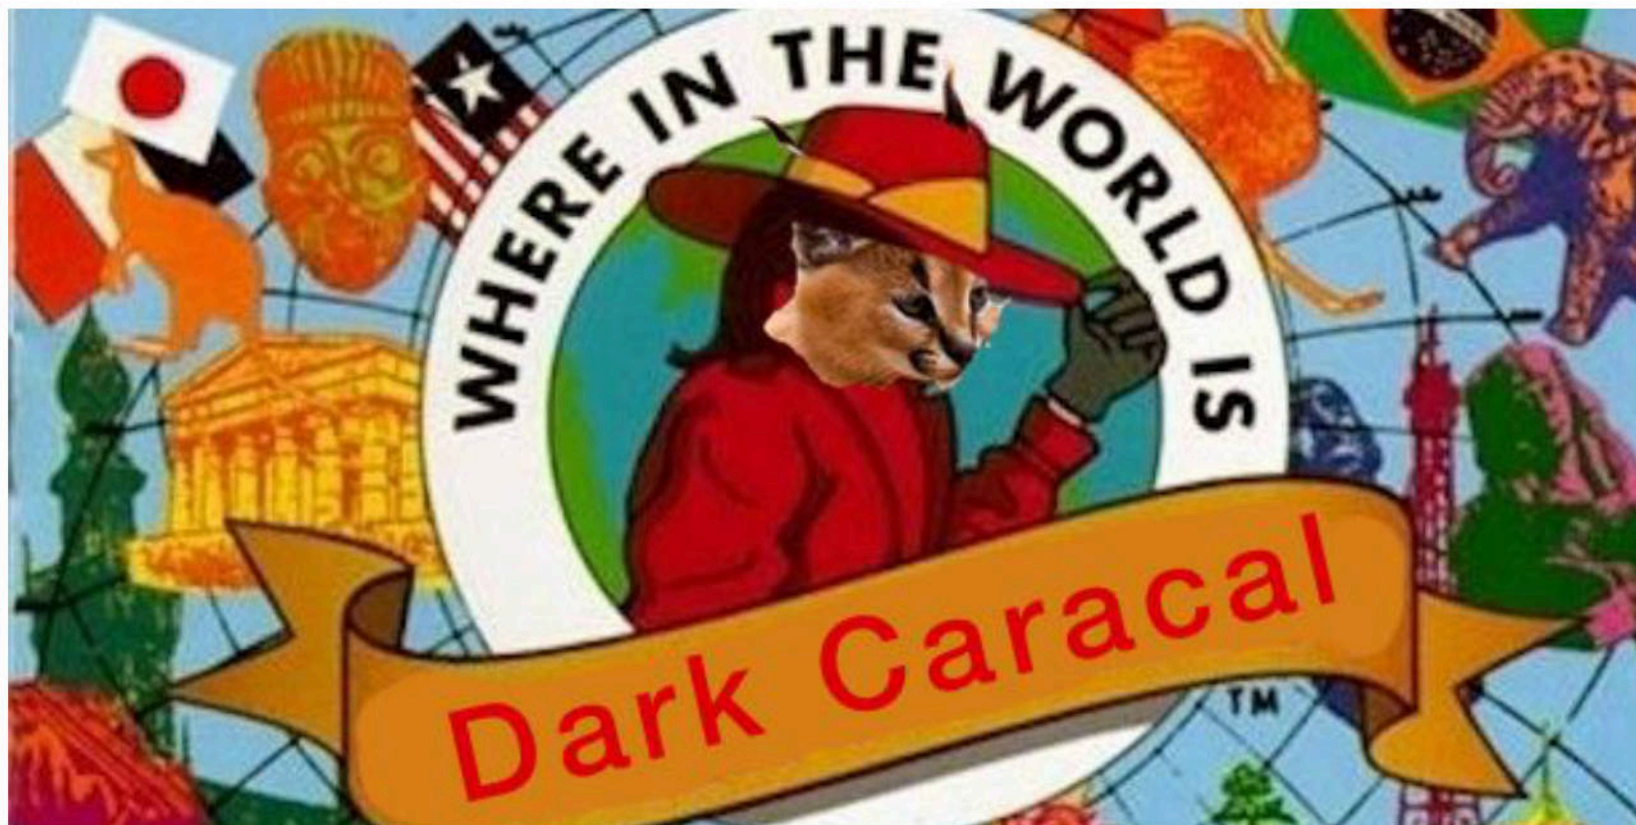

Split of exfiltrated content on adobeair.net

Bandidos at large: A spying campaign in Latin America

ESET Research uncovers an active malicious campaign that uses new versions of old malware, Bandoob, to spy on its victims

BANDOOK: SIGNED & DELIVERED

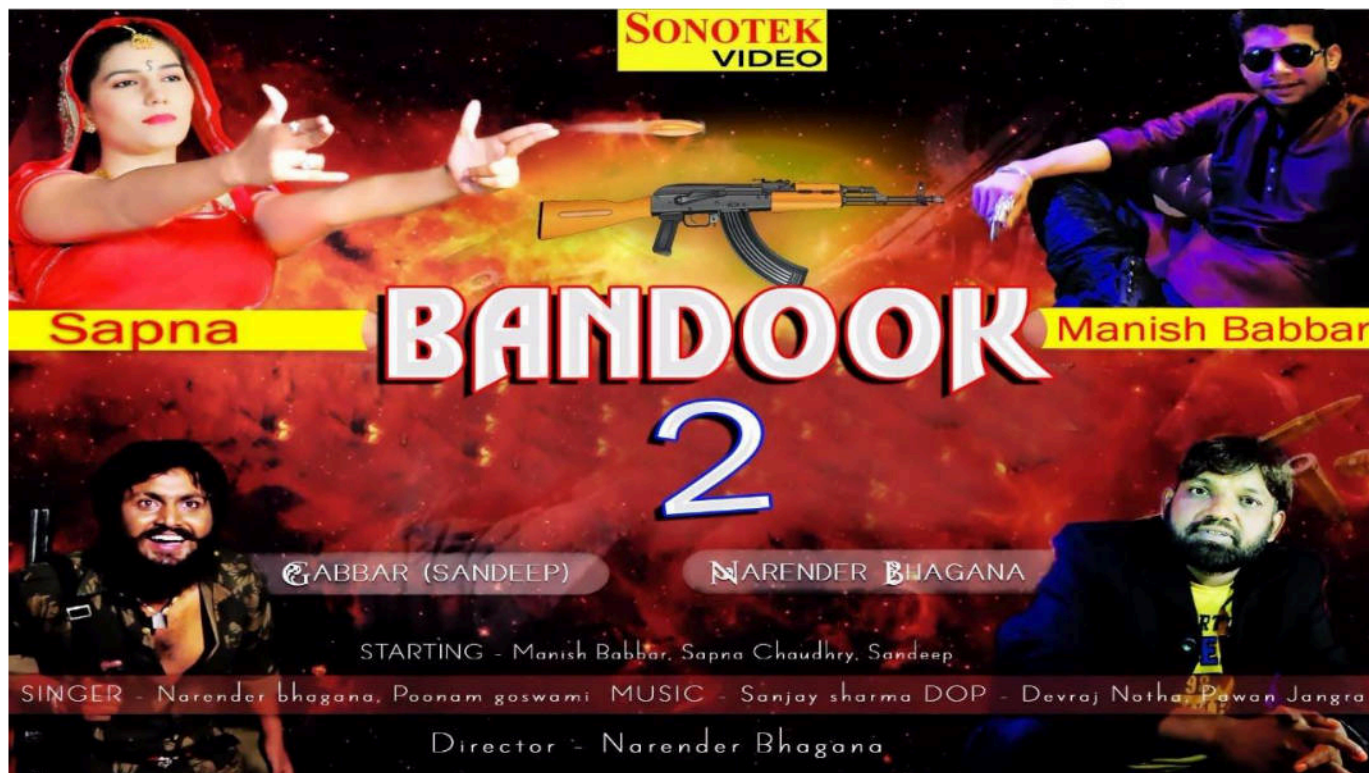

...

📅 November 26, 2020

Introduction

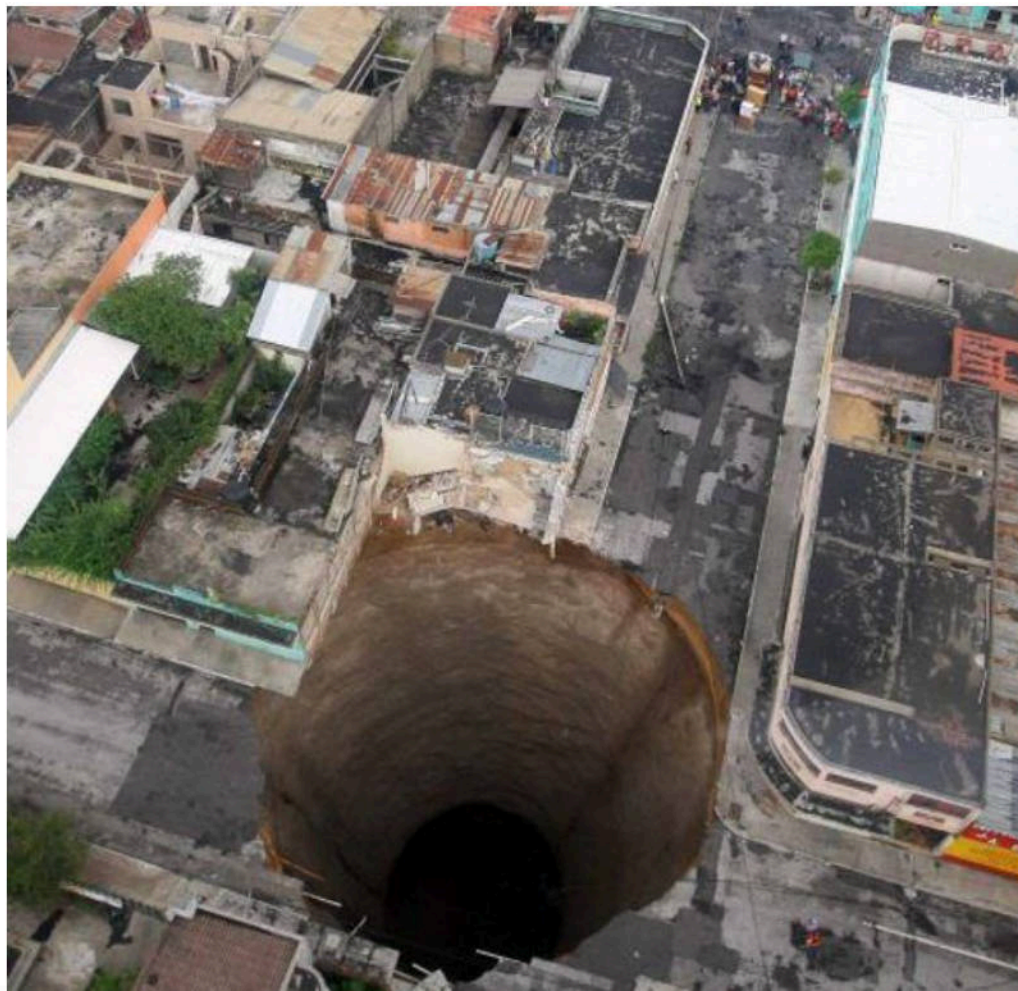

Check Point Research recently observed a new wave of campaigns against various targets worldwide that utilizes a strain of a 13-year old backdoor Trojan named Bandoob.

2022: A New Bandook Appears

Conclusions

- Despite the number of mistakes they have made, Dark Caracal is still disturbingly effective.
- The number of cyber mercenaries is growing, and there is a spectrum, not everyone is a high end player
- IMO this growth is due to how successful encryption has been, web encryption is ubiquitous, E2EE is nearly there as well
- This means that governments are increasingly hacking individual devices to spy on people
- Encryption was the fight of the last 30 years, and we are winning. Spyware is the next battle
