Call waiting

From Wikipedia, the free encyclopedia

Call waiting is a [telecommunication](#) service offered by a telephony service provider to a subscriber by which the subscriber may suspend a [telephone call](#) already in progress to accept a second call. The subscriber may switch between calls, typically by using the [hook flash](#) signal.

TYMNET PCP OUTDIALS: A listing of Pc-Pursuit out-dials usable on Tymnet or most X.25 systems. These are very good quality outdials for the most part.

Compiled : 01/05/91

Author : Net Runner

Editor : Net Runner

System : TymNet PCPursuit Outdials

Uses : Calling to most major North American cities

Dialups : Multiple Tymnet dialups per LATA

Port : 2400 bps, 7 bits, Even Parity, 1 Stop Bit

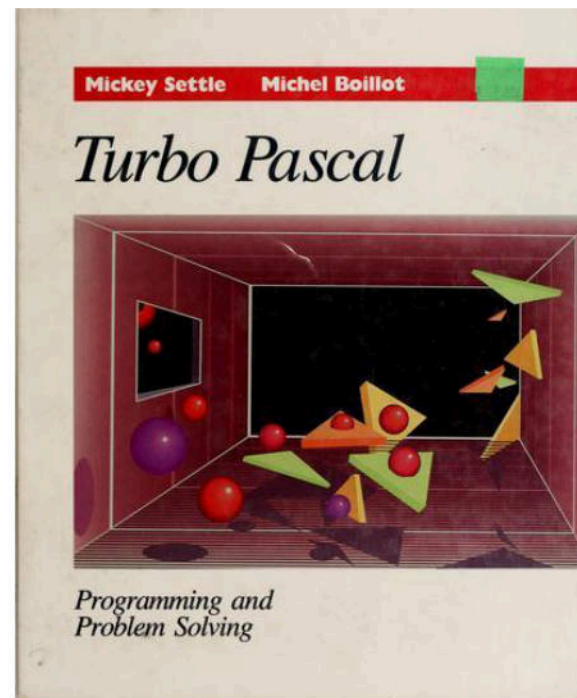

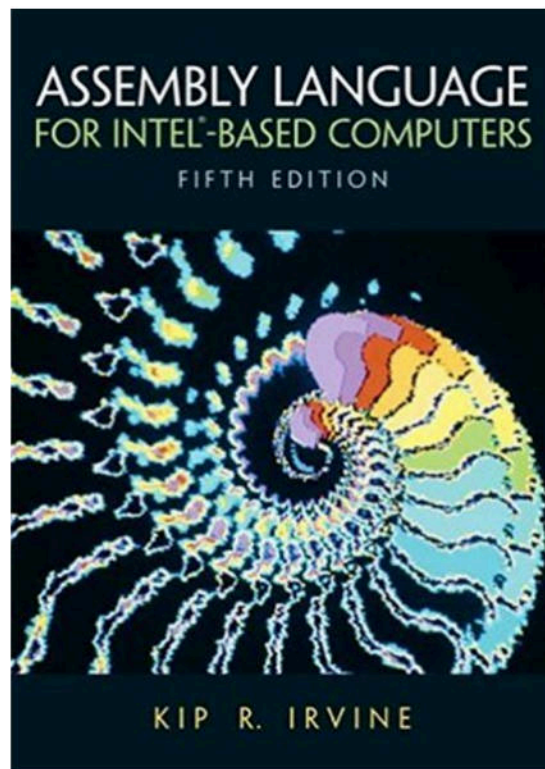

Emulation. : ANSI, TTY, Vt-52, Vt-100

3110	2030	0121	(2400	baud)	(E.C. 203)

Feb 20, 1992 - Machba turns down the government request to be a nationwide ISP. Machba agrees to be a leased line Internet Service Provider but not a dial-up service provider. Based on this meeting Actcom, **Dataserv** and Netmanage (later renamed to Netvision) receive the ratification from the Ministry of Communication to become dialup Internet service providers by the end of the year.

Anti Debugging Tricks

Anti Debugging Tricks

By:

Inbar Raz

Assistance by Eden Shochat and Yossi Gottlieb

Release number 5

Today's anti debugging tricks divide into two categories:

1. Preventive actions;
2. Self-modifying code.

Most debugging tricks, as for today, are used within viruses, in order to avoid dis-assembly of the virus, as it will be exemplified later in this file. Another large portion of anti debugging tricks is found with software protection programs, that use them in order to make the cracking of the protection harder.

B. To get everyone up to speed with iCE VGA developments, I'll try to briefly summarize what's taken place within the past month. Among our first acquisitions of talent, the three uzi-wielding Isrealies from the group The Phoney Coders have joined iCE in what has proved to be a most beneficial move for us. Ford Prefect, Mr. Bug, and Codesafe Hawk all bring along extensive talent in the coding arena. Ford, eager to have something put in this month's pack, released his 1.0 version of the 3dview utility. With it, Ford has created a whole new art form for iCE artists to explore. The utility allows for art pieces, created in 3-d studio, to be transformed into vectors, which allow for unlimited angle and view observation. Even though the program is in it's initial stages, we are all excited to see what it will become in the future. Mr. Bug also contributed to the iCE pack this month with two vector demos: one with balls and one with dots. These don't even begin to demonstrate the full scope of this coder's capabilities, so we also look forward to his future projects.

Subject: Virus Buster v2.00 (beta) (PC)

Hello!

I am looking for a few beta-testers for the new version of Virus Buster. The current version of VB is 1.10 and a new 2.00 will be released soon. I need people who have special hardware (large HD, special graphics adapter etc). People who like to volunteer for this task should send e-mail to Yuval Tal (NYYUVAL@WEIZMANN.BITNET) or to one of the addresses written at the end of this letter.

Ok, here is some info about Virus Buster 1.10:

Virus Buster is an anti-viral software that was written in Israel by Uzi Apple (NYAPEL@WEIZMANN.BITNET) and by me. It can identify and remove about 15 viruses (version 2.00 will remove about 23) including: Data-crime, Jerusalem, 1st of april, Saratoga, FuManchu, Icelandic and more! Most important thing: It is PUBLIC DOMAIN! No fee charged! It has windows, statistics and much more. It will be soon available on the SIMTEL20 directories.

An Anecdote

Virus Name: Haifa
Aliases:
V Status: Common
Discovered: September, 1991
Symptoms: .COM file growth; TSR; system hangs
Origin: Israel
Eff Length: 2,351 - 2,372 Bytes
Type Code: PRsAK - Resident Parasitic .COM &.EXE Infector
Detection Method: ViruScan, NAV, AVTK, Sweep, F-Prot,
IBMAV, NAVDX, VALert, PCScan, ChAV,
NShld, LProt, Sweep/N, Innoc, AVTK/N, NAV/N, IBMAV/N
Removal Instructions: Delete infected files

General Comments:

The Haifa virus was discovered in Israel in September, 1991. Haifa is a memory resident infector of .COM and .EXE files, including COMMAND.COM.

To: ESaSS B.V.

Hello.

My name is Inbar Raz, and I am 17.5. I am a virus fighter, and an author of an Anti-Virus software.

I was one of the first to discover the Haifa Virus in Israel, back in September 1991 (or was it 1990? I don't even remember...). Anyways, I made a complete disassembly of the virus, and I studied the virus REAL hard, and commented almost completely my reproduced source.

Since I am rather qualified to discuss the complete implementation of the encryption algorithm, which was fully commented and explained in my source, I thought that if I gave it a little effort, I could come up with a search string for Haifa, that would suit your needs.

So I did. Aided by the documented source, I collected the necessary information to create this string. I brought it here, along some comments.

However, for some reason I don't understand why it doesn't work. I tried adding 'E9 **' to the beginning of the screen, in case you started checking only from the beginning of the file, and yet it didn't work. I was thinking maybe you could tell me why it doesn't work, and if you manage to fix it, let me know.

```

;
; Haifa virus
;

B8/B9/BA/BB      ; Loop Register - MOV AX/BX/CX/DX
?? ??            ; Offset

BE/BF            ; Decryption index - MOV SI/DI
?? ??            ; Offset

*                ; < dummy code > 2 to 4 bytes, usually 9?'s

2E, 80           ; BYTE PTR CS:

04/05/34/35      ; ADD/XOR [SI]/[DI]
??              ; Decryptor

46/47            ; INC SI/DI - Index increase

48/49/4A/4B      ; Loop decrease

75              ; JNZ

F8/F7/F6/F5      ; Jump offset

```

Complete string:

```
B? ?? ?? B? ?? ?? %4 2E 80 ?? ?? 4? 4? 75 F?
```

or

```
B? *2 B? *2 %4 2E 80 *2 4? 4? 75 F?
```

Carding

CBI & TRW

Trade vs. Use: Hacker Ethics

The Bible of Fraud: Part II
Written By: Sneak Thief

What A Fool I Was!

Looking back on my old file, The Bible of Fraud, I'm almost sickened at how lame I was back then (then again, some people will argue about how lame I am NOW), so this file will attempt to rectify some of the earlier flaws in The Bible of Fraud.

CBI/TRW

CBI and TRW are huge credit verification systems which contain credit information on 125 or so million Americans. If you simply know the name, address, and first letter of someone's street, you can find out their credit card number, and other essential informations. You can see how useful this can be for carders.

- More (Y)/N/NS? NS

But TRW and CBI's usefullness does have it's price, however...

CBI and TRW passwords are much harder to find than they were way

Famous Busts

Deri Schreiberman (1991)

According to wire services, Deri Schreiberman, an 18 year-old graduate of Israel's Technion Institute and a native of the northern Israeli city of Carmiel, was arrested by Israeli police for allegedly breaking into US military computers and commercial credit card systems. Israeli spokes person Eitan Raz, commenting on the equipment found at Schreiberman's home for allegedly making free of ~~the phone calls~~, was quoted as saying "this was a very complex system. It was the first time such technology was discovered in Israel."

>From time to time, however, there are arrests (see PWN on Phrack 35, 38 elsewhere). These usually involve (in the case of the guy described on Phrack 35) a tip from police overseas, who kept bugging the Israeli police until they made a move, or idiots who sell things. The guy in the Phrack 35 World News, Deri Schreiberman, was arrested after he supplied credit cards to people in the U.S. and Canada, who turned him in when they got caught. He himself turned in a lot of people, but his information "just" led to them being visited. Nothing much has been
