# Most Depressing Brain Finding Ever

By Marty Kaplan

GETTY

Yale law school professor Dan Kahan's new research [paper](#) is called "Motivated Numeracy and Enlightened Self-Government," but for me a better title is the headline on science writer Chris Mooney's [piece](#) about it in Grist: "Science Confirms: Politics Wrecks Your Ability to Do Math."

# Control Questions

| <b>A – Control Condition #1</b>             |                |                 |
|---------------------------------------------|----------------|-----------------|
|                                             | Rash Got Worse | Rash Got Better |
| Patients who did use the new skin cream     | 223            | 75              |
| Patients who did NOT use the new skin cream | 107            | 21              |

**A – People who used the skin cream were more likely to get BETTER than those didn't**

B – People who used the skin cream were more likely to get WORSE than those didn't

| <b>Group B – Control Condition #2</b>       |                 |                |
|---------------------------------------------|-----------------|----------------|

# RULES AND REGULATIONS

Adopted by the Local United States Food Administration for the season of 1918, pertaining to the harvest and threshing of grain.

## RULE I.

That the local U. S. Food Administration deputize the man in charge of each threshing machine operating to act as their agent, to see that all ways and means be observed, so as to prevent the waste of grain in any manner.

## RULE II.

It shall be in his power to direct all men who are working about the machine or on the job of threshing, and see that they give efficient service, and in any event any one is disloyal he shall be reported to the United States Food Administration and dealt with according to the rules laid down by the Government.

## RULE III.

It shall be the imperative duty of every man in charge of a threshing machine to see that his machine is in perfect running order before he shall attempt to do any work at threshing and in case he is unable to correct the defects, he is allowed the privilege of seeking aid of the U. S. Food Administrator who will report his troubles to the manufacturer of his machine, and get his troubles adjusted.

## RULE IV.

As it is an order to save grain, the man in charge of the machine and farmer are to arrange to have a man to attend to the cleaning up around the machine, and help where needed, to keep the machine running correctly, and not allow bundles to be run over by teams and wagon; also it is recommended that they shall arrange to have a sufficient number of racks to haul bundles on, which will be built with tight floor and a 2 x 4 around edge for the express purpose to save grain.

## RULE V.

It is also demanded of the managers of threshing machines to provide canvass, size not less than 10 x 14, to be put under the feeder of the machine and to avoid all leaks; and the men who are pitching to the machine must observe these rules:

1. That bundles must be pitched head first into the machine which is the correct way of feeding a machine. Also the bundles must be pitched at a uniform speed, and in no case pile them upon the feeder.
2. It is demanded by the Government that the fall wheat and rye shall be threshed first. Spring wheat to be threshed at time of threshing oats.
3. In regard to time for a day's work, we would recommend that as the Government asks us to save all the grain possible, we think it advisable to use all the day time that is available and it shall be expected that the people will be loyal and work the best hours of the day; owing to the morning's dampness and the difficulty in doing good work in the early morning, we would recommend that the hour of quitting shall not be before 7 p. m., new time.

## RULE VI.

It shall be the duty of the machine man to avoid all waste for the following reasons:

- A. Threshing grain when it is tough (damp and unripe.)
- B. Loss from shattering in bundle wagons.
- C. Carelessness in keeping threshing cylinder up to speed, and in adjustment of blower, etc., dull and bent teeth.

D. Carelessness in feeding bundles or loose grain into the machine.

E. Carelessness in allowing grain to leak on the ground around and under the machine and haste in cleaning up at close of operations.

F. Improper adjustment of concaves and other parts of machine.

## RULE VII.—Pertaining to Farmers.

It shall be the duty of the farmer to see that all wagon boxes are tight. Also to see that there is no waste at the bins due from scooping and at the machine while changing the conveyor from one wagon to another. We will also recommend that if it is impossible to rake the wheat field before the finish of the wheat threshing; it be raked after, and threshed on the return of the machine for the oats threshing, also to see that no grain is left by the man who pitches on the shocks; "Always scrape up after each shock and pick up all bundles lost or dropped from wagons by the wayside."

Every effort should be given with the object of getting the grain into proper channels of trade and not permit so great a percentage to be distributed upon the ground or into the straw pile to be fed later to the stock on the farm. The practice of overlooking the leaks with the excuse that the stock will get the benefit when turned in, should be discouraged this year, when no wheat should be fed to animals.

Suggestions and mention of instances where wastes during threshing has occurred in the past will be appreciated.

We are all soldiers of the Home Guard fighting to win the war, and the first duty of a soldier is to obey orders.

## The science behind Receptiviti

Receptiviti.ai - Enabling AI platforms with emotional intelligence

Receptiviti's core IP, the Linguistic Inquiry and Word Count (LIWC2015), is the gold standard in language-psychology based text analysis. LIWC2015 has been developed continuously through more than 20 years of academic and applied research by Receptiviti co-founder, James W. Pennebaker—one of the world's preeminent experts in language and social psychology.

Receptiviti captures people's social and psychological states by applying NLP techniques to quantitatively determine peoples' psychology, emotions, thinking styles, social concerns, and even parts of speech.
