this never happens...

END

Solution: Images

The image shows a screenshot of an eBay listing for an HP 7265NGW laptop. The listing includes a main image of the laptop, a title, condition, price, shipping, and delivery information. A blue arrow points from the main image to a zoomed-in view of the laptop's bottom panel. In this zoomed view, another blue arrow points to a specific label that reads "Property of WeWork".

HP 7265NGW INTEL CORE M5-6Y57 8 GB Ram FRENCH KEYBOARD

Condition: **Used**
* Grade C - Item fully tested, in good cosmetic condition showing minimal scratching, charger*... [Read more](#)

Price: **EUR 190.00**
Approximately US \$201.16 [Add to List](#)

Shipping: **EUR 100.00 (approx US \$106.88)** Sellers Standard International Rate. [See details](#)
International shipment of items may be subject to customs processing and additional charges.
Located in: Cork, Ireland

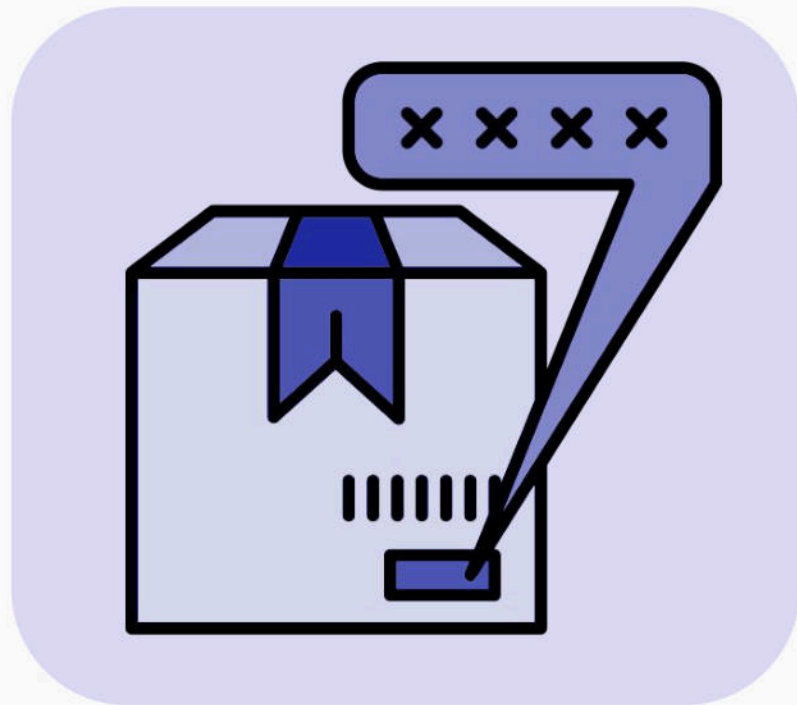

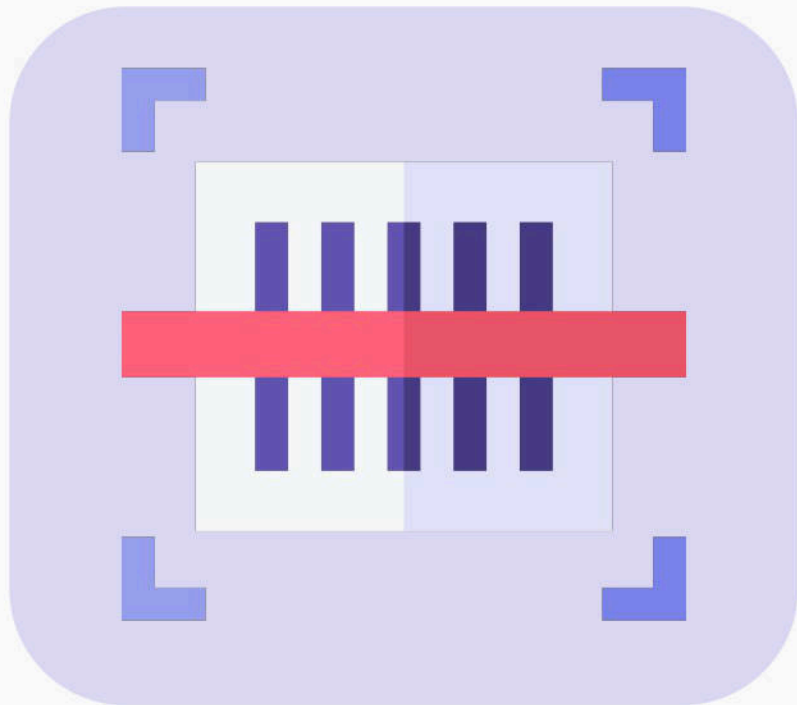

Delivery: **Estimated between Fri, Oct 6 and Fri, Oct 13 to 94041**
Seller ships within 3 days after posting cleared payment.
Please allow additional time if international delivery is subject to customs processing.

```

New seller enumeration

Rooted Android with
Xianyu

Frida API signing server

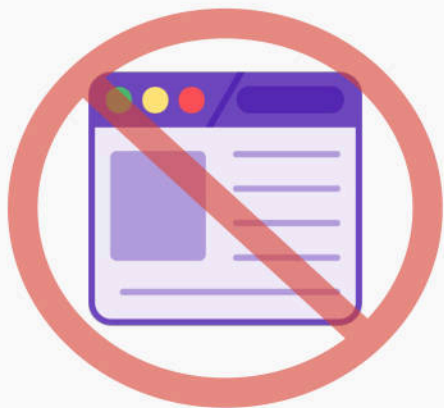

Searches routed via
residential proxies

We have the **relevant sellers**, but not the **items**...

Limited non-app endpoints

Kind of...

There are "web preview" pages for sellers and items to get people to download the app.

Problem: Rate limiting is *severe*. Just a few previews and it forces you to log in for more.

Doing this at **scale** requires a **ton of IPs**, which is **expensive** even for budget proxy networks.

American Registry for Internet Numbers

RSP Service Categories and Fees

The table below displays the annual Registration Services Plan fee per service category for ARIN customers. The aggregate block size consists of the total IPv4 or IPv6 resource holdings of an organization.

Service Category	Fee	IPv4 Aggregate Block Size	IPv6 Aggregate Block Size
3X-Small*	\$250	/24 or smaller	/40 or smaller
2X-Small	\$500	Larger than /24, up to and including /22	Larger than /40, up to and including /36

**There is a temporary IPv6 fee waiver for organizations in the 3X-Small service category allowing for more IPv6 resources than normal while still remaining in the 3X-Small service category and paying only the 3X-Small service category fee. A 3X-Small organization may receive registry services for up to a /36 of total IPv6 space and remain in the 3X-Small service category rather than being charged the 2X-Small service category fee. This waiver will expire 31 December 2026.*

Stargate

Stargate runs TCP SOCKS proxies on different ports egressing on sequential IPs in the same subnet. This requires the host running stargate to have the subnet routed directly to it.

If you have an IPv6 subnet, stargate can allow you to make full use of it by any program that can speak SOCKS.

Usage

```
Usage of ./stargate: [OPTION]... CIDR
  CIDR example: "192.0.2.0/24"
OPTIONS:
  -listen string
    IP to listen on (default "localhost")
  -port uint
    first port to start listening on
  -random uint
    port to use for random proxy server
  -verbose
    enable verbose logging
```

28 hours later

A man with dark skin, wearing a pink baseball cap with a logo and a dark blue polo shirt, is speaking into a black microphone. He is outdoors in a cluttered area with various objects and debris in the background. The text "mass appeal" is visible in the top right corner.

*mass
appeal*

So that was a fucking lie.

Internal credentials

AppleConnect Credentials

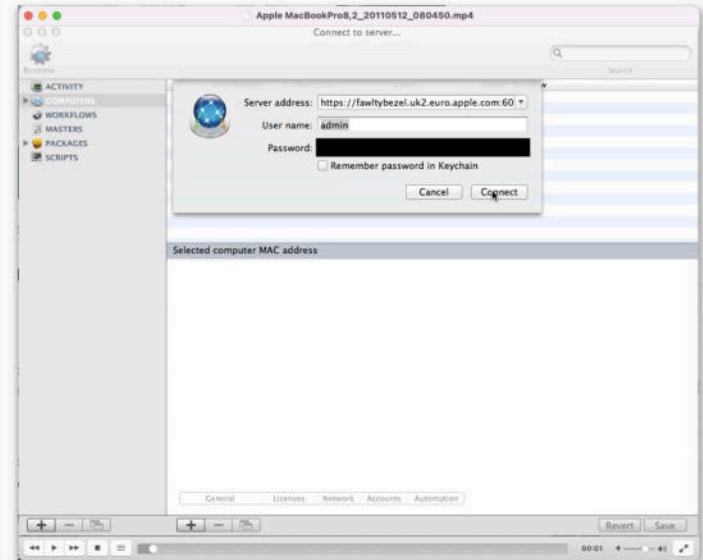

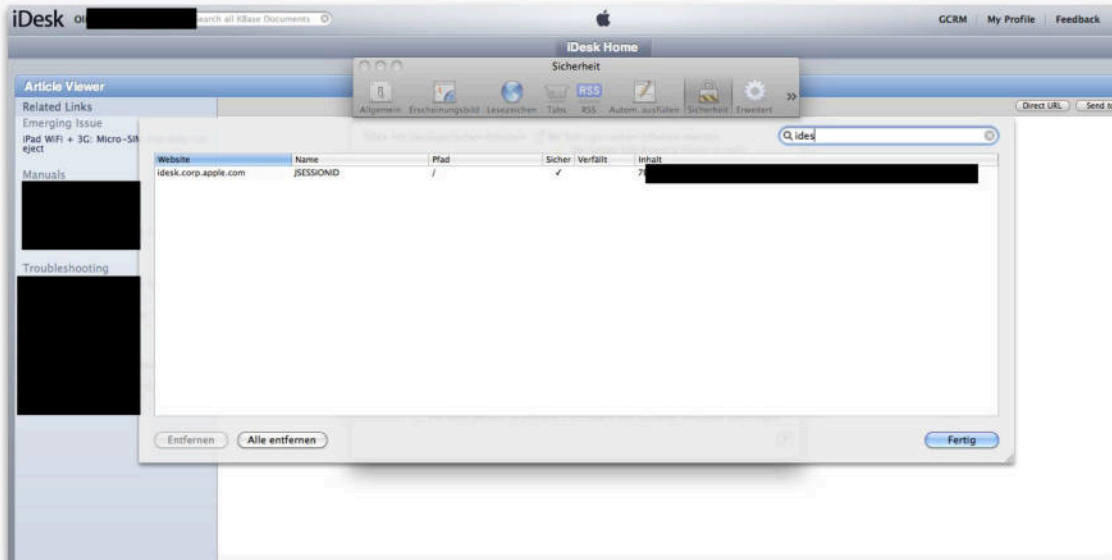

Your AppleConnect account is the key to nearly every application, website or service within Apple. AppleConnect's single sign-on feature means that you sign in once and the rest of the services you access open automatically, without having to re-enter your password. You control your personal level of automatic access in AppleConnect's preferences.

When you first sign in, you will be prompted to change your password. Be sure to select a password that is easy for you to remember but difficult for others to guess. Password selection tips can be found on IS&T Web.

Visit IS&T Web's AppleConnect account page [here](#).

Account Name: ay

Password: AY

Internal support tickets

The screenshot displays the iRepair internal support system interface, which is used for managing Apple product repairs. The interface is divided into several sections:

- Top Navigation Bar:** Includes the iRepair logo, a search bar, and a list of navigation links: GCRM, MG, All You Need, WORKTOOLS, WORKWEBS, Leo, ARTICLES, SCOPE OF SUPPORT, Airport, iPod, Battery, Portables, Apple Legacy, \$CEmpowerES, @send this article@, and Private.
- Left Sidebar:** Contains a list of repair categories: Recent Repairs (2), All Repairs (2), Product History (1), Products (1), Cases (2), CRUs (0), and Fulfillments (0).
- Main Content Area:**
 - Unit Status:** A red banner at the top reads: "UNIT STOLEN!! If any customer comes in or calls asking for service or support for this unit, please call the Apple Retail Loss Prevention Team. We need to be notified as soon as possible. You may also contact [redacted]".
 - Product Information:** Displays details for a MacBook (13-INCH, LATE 2009) with serial number [redacted]. The description is "MB 13.3/2.26/2X1GB/250GB/SD". The coverage is "Limited Warranty *". The date of purchase is "February 01, 2010 (274 days remaining)".
 - Customer Information:** Includes fields for Manufacturing Date, Sold Through Channel, Ship Date, Ship Point Name, POS Receipt No., and Registered Via. The ship date is "IMC".
 - Customer Info Section:** Includes fields for Name, Email, and Alternate Phone.
- Bottom Section:** A table titled "GROSSE BOCKENHEIMER STRASSE" lists repair tickets. The table has columns for Repair ID, Age, Repair Type, Comment, Repair Status, Description, First Name, Last Name, Phone Number, Serial Number, and Genius.

* Weekly and Quarterly Actual are measured as of business from the previous day (does not include today's realtime). For example, if today is Sunday, the Weekly Actual data is from the previous week. For all the other days, the data is current through yesterday.

* Weekly and Quarterly FCST are measured as entire week or Quarter FCST value as determined by Finance. This report is to be used as a guide.

The report that is sent to you weekly by Finance is official plan of record and the only tool to be used in determining actual achievement of metrics and/or bonus.

Apple Expenses Germany
To: [REDACTED] @group.apple.com

Hi,
here are my Bank Account Details for my Employee Expenses, which I submit with eApproval.

**APPLE
EMPLOYEE EXPENSES
BANK ACCOUNT DETAILS**

To facilitate reimbursement of employee expenses, Accounts Payable require employee bank details to be set up on Apple's payment system. Please complete below details.

If bank details are not available to AP, there will be a delay in processing any expense reports you may submit in the future.

Please complete and return this form via email during your first week to: [REDACTED]@group.apple.com.

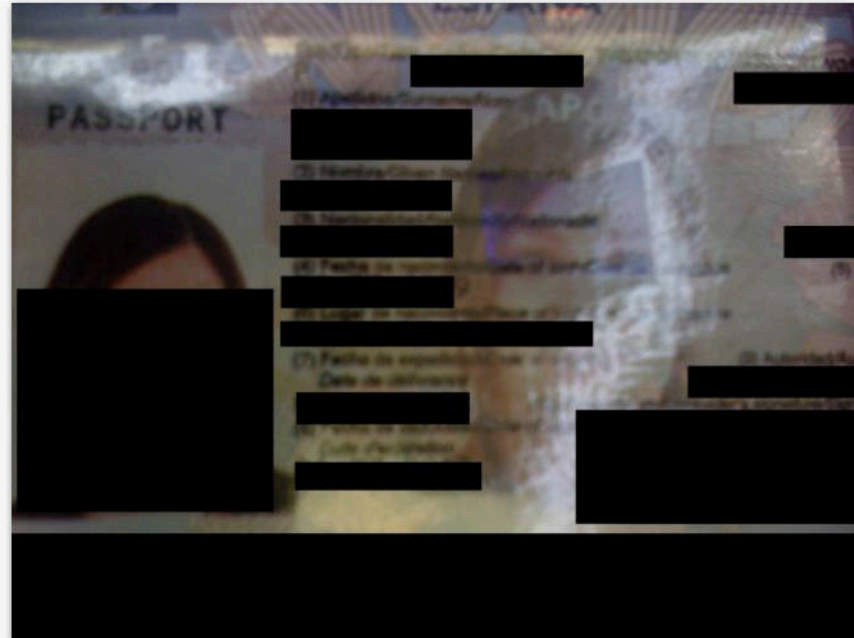

Please write Apple Expenses + your country, in the subject header of your email.

Employee name: [REDACTED]
Bank Name and Address: [REDACTED]
Bank Account No: [REDACTED]
Bank Sort Code: [REDACTED]
Bank IBAN No: [REDACTED]
Bank BIC/Swift Code No: [REDACTED]
Apple Employee Badge ID N°: [REDACTED]
(Available after 1st day on Apple Directory)

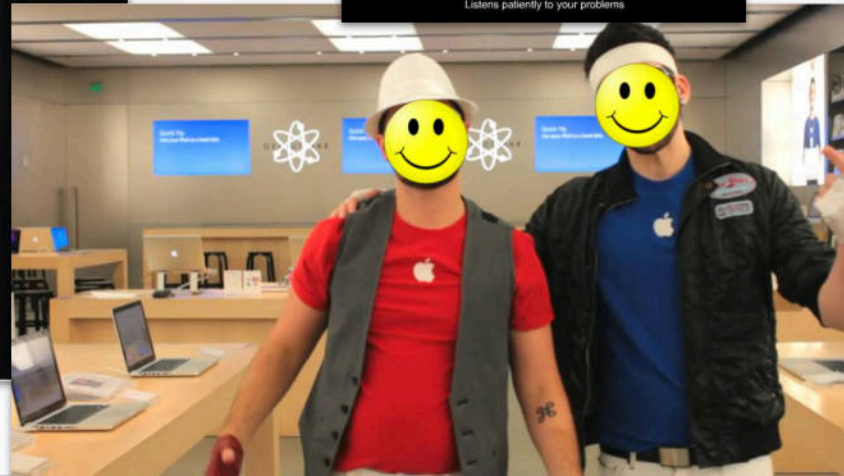

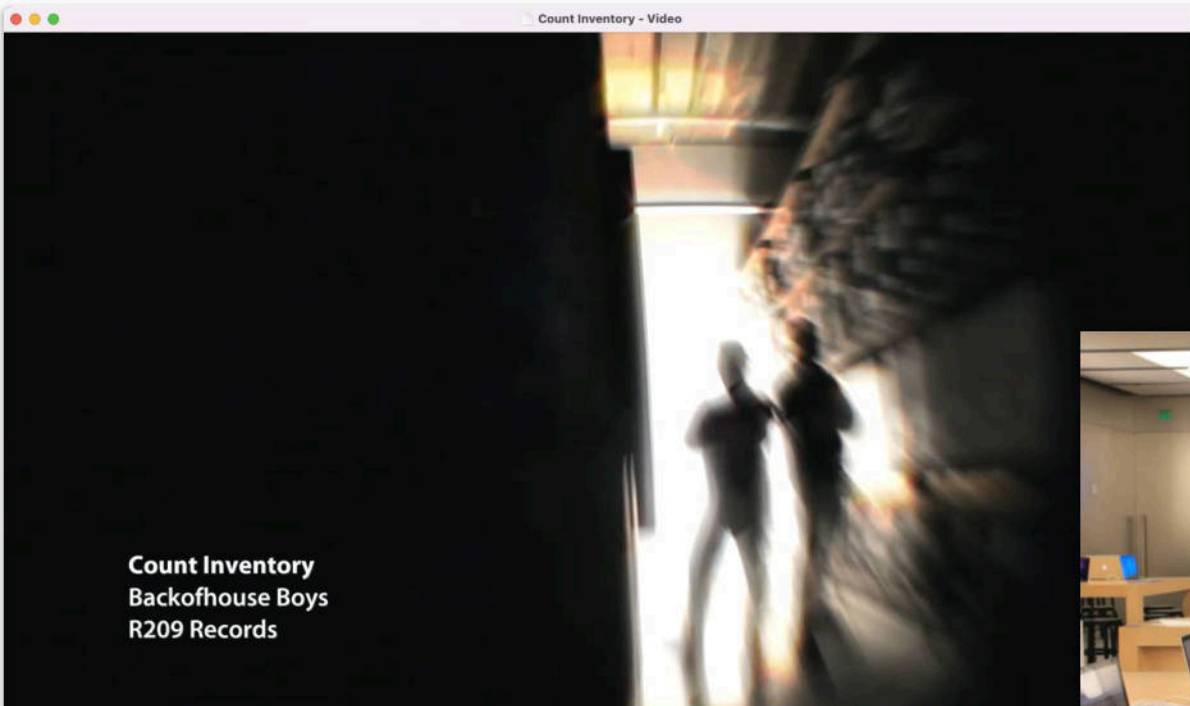

All bank details can be obtained from a bank statement or by contacting the branch where your account is held.

Please fill in ALL details; your employee vendor account cannot be set up without them.

2 months ago

We have forwarded the details you have provided to the appropriate teams within Apple.

The intent of security.apple.com, where you submitted this ticket, is primarily for reporting technical vulnerabilities in our services or software.

Since we have already forwarded the information provided to the appropriate teams, there are no additional actions that we can take, so we will be closing this ticket. You will see a message that states "We have determined your report does not have security implications" - this is a default message that appears when we close an issue without forwarding to an engineering team for a technical resolution. It indicates there is not a technical vulnerability found and does not mean we are dismissing this report.

Our team has provided this information the appropriate parties. No further action can be facilitated by our team through this tool (security.apple.com).

Thank you for reporting this concern to us.

[REDACTED]@apple.com>

to me ▼

Dear Matthew

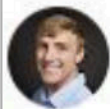

I understand you have been communicating with Apple Information Security with regards to some hardware and are willing to pass this to us so we can investigate further.

You mention you are in the South Bay Area and I assume you mean the SCV area? Would you like me to arrange for someone local to make contact?

Many Thanks

[REDACTED]

Drove 10 minutes to drop it off

Could you please send us all the files that you consider sensitive? This would greatly help us with our assessment. You can simply attach them to the issue here.

We appreciate your cooperation and look forward to receiving the files. Feel free to reach out if you have any questions or need further assistance.

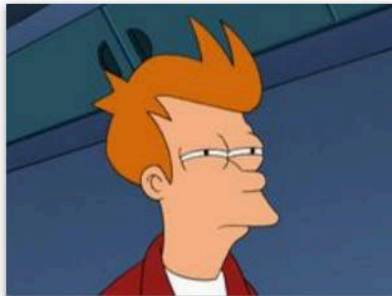

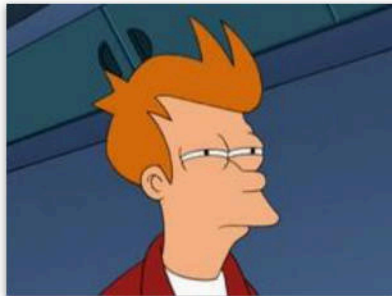

Matthew Bryant

7/17/23, 10:12 PM

Hey folks,

I sent some samples with my original report (not sure if they can be seen on your end?). I handed the drive over to the GSOC earlier today so I don't have access to the data anymore.

If you'd like me to re-attach the samples again let me know!

Dev-Fused iDevices

The Prototype iPhones That Hackers Use to Research Apple's Most Sensitive Code

Very few people have heard of them, but "dev-fused" iPhones sold on the grey market are one of the most important tools for the best iOS hackers in the world.

By Lorenzo Franceschi-Bicchieri

Apple Security Research Device Program

How it works.

The Security Research Device (SRD) is a **specially fused iPhone** that allows you to perform iOS security research without having to bypass its security features. Shell access is available, and you can run any tools, choose your own entitlements, and even customize the kernel. Using the SRD allows you to confidently report all your findings to Apple without the risk of losing access to the inner layers of iOS security. Plus, any vulnerabilities that you discover with the SRD are automatically considered for [Apple Security Bounty](#).

The owner of the Twitter account [Jin Store](#), which claims to sell dev-fused or prototype iPhones, shared their catalog with Motherboard. A dev-fused iPhone 8 Plus costs \$5,000, an iPhone XR \$20,000, and an older iPhone 6 costs \$1,300 (there are several different types of dev-fused devices that have different levels of security and varying features on them. The price of the dev-fused device depends on the security and features it includes.)

I dont know a ton about this honestly

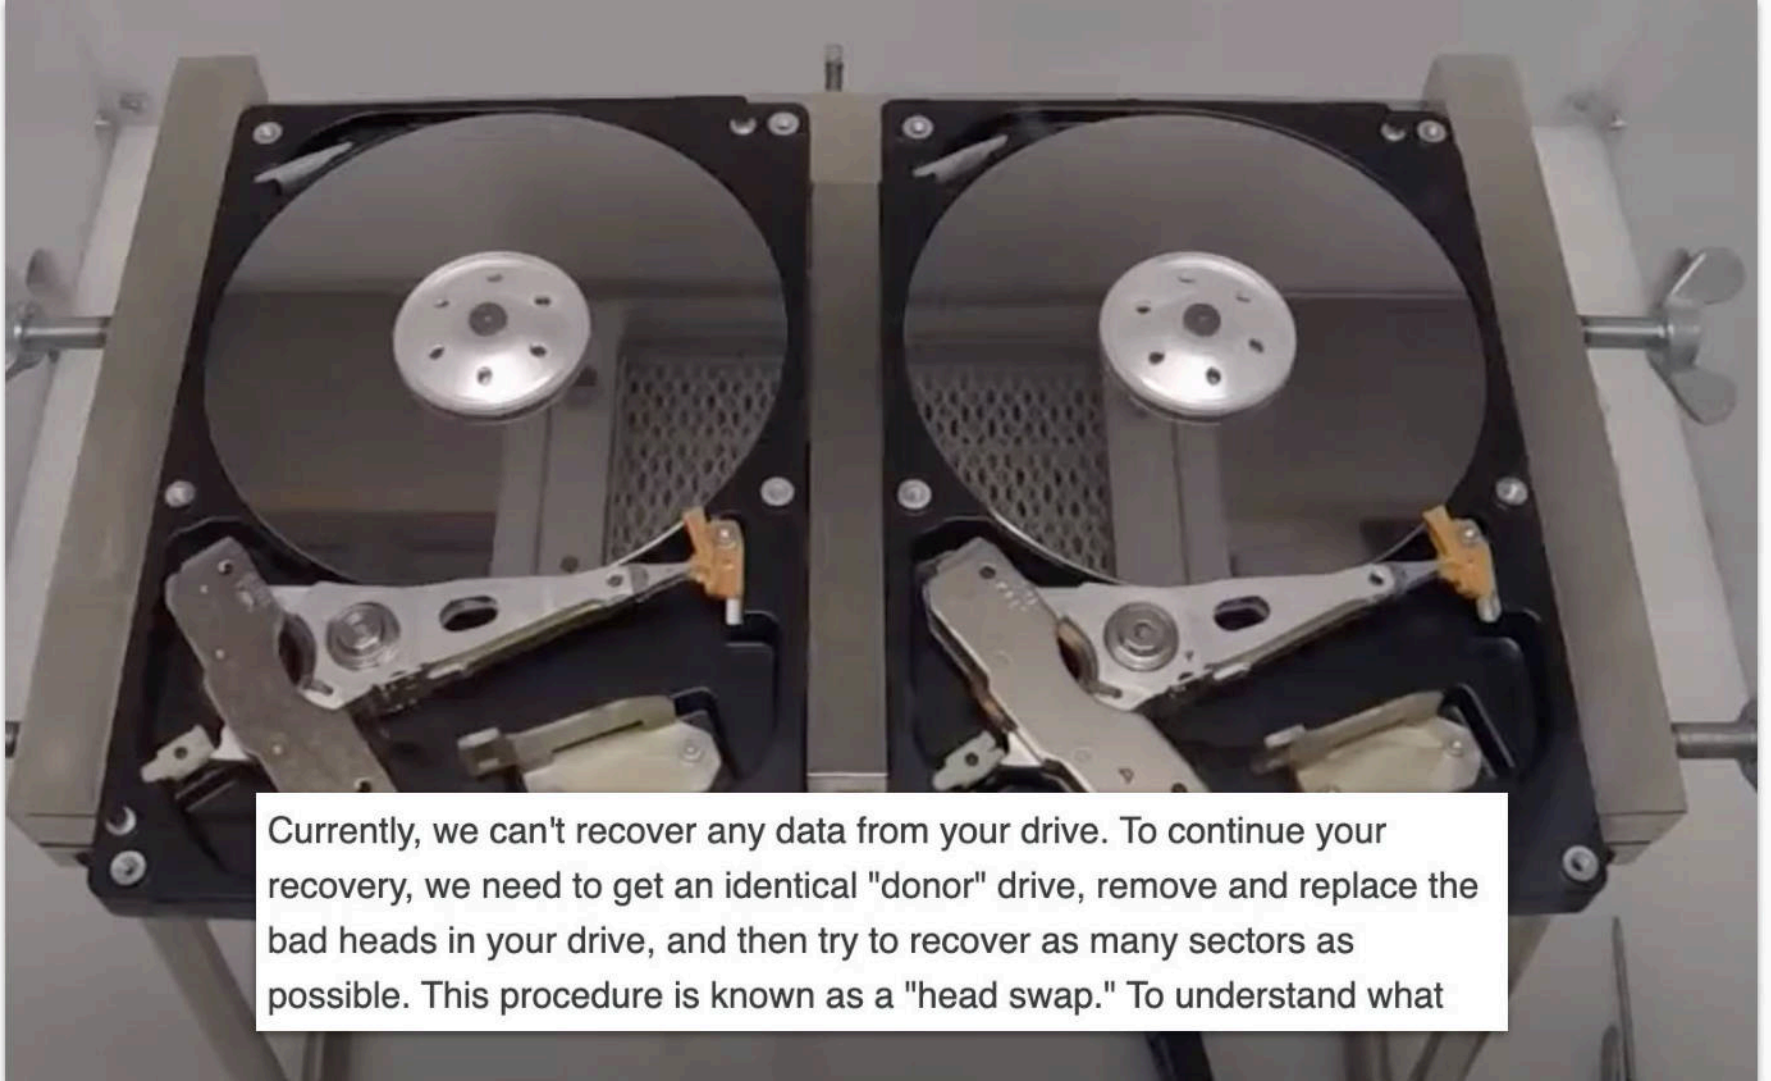

Let me call my expert

Hi Matthew,

I suppose there is a chance it can be recovered if the platters were not hit. And if they are in good shape after the metal pieces fell on the platters. If it was powered on after, it's probably toast from the metal shards flying around. If not, and if the drill did not destroy the NVRAM/ROM chip on the PCB (I don't think it's located where the hole is), it could be recoverable.

Based on our history with "HTS545032B9SA02" (we've worked on this exact model 67 times) and your device's symptoms, you have a **85% chance of a successful recovery** (again, this assumes there is no platter damage).

- "Successful" means we'll be able to recover at least some data you want (we always try to recover all the data).
- Our history of *successful* recoveries for "HTS545032B9SA02" reflects that we've been able to recover, on average, **93.8%** of our customer's data.

Currently, we can't recover any data from your drive. To continue your recovery, we need to get an identical "donor" drive, remove and replace the bad heads in your drive, and then try to recover as many sectors as possible. This procedure is known as a "head swap." To understand what

Matthew Bryant <mandatory@gmail.com>

to Tim ▼

Oh also this is probably implied but: does this mean the platter is not drilled through and isn't shattered?

Obviously recovery seems slim even in the case that it isn't but just wanted to confirm.

Cheers,

-Matt

No, the drilled hole pretty much missed everything, but it did hit the PCB connector that is attached to the heads, so we'll need new heads. Your drive also doesn't have a top head, so no data is on the top platter, which was the most exposed platter to the dust/debris that got in through the drilled hole. All the platters looks good considering the circumstances, so I'm optimistic we'll be able to recover something.

We were able to recover 99.9998% of the sectors on your device.

We've started moving your recovered data to the transfer drive and we'll touch base when it's all finished and ready to go.

Oh, yeah. It's all coming together.

SFC專用電腦,嚴禁其它用途!

正常開機步驟:

- 1.連通電腦主機電源.
- 2.連通顯示器電源.
- 3.啓動主機電源開關按鈕.
- 4.啓動顯示器電源開關按鈕.

正常關機步驟:

- 1.正常關閉SFC程序.
- 2.點擊電腦桌面左下角<<開始>>按鈕,選擇<<關機>>選項.
- 3.待出現<<Windows關機>>提示框后,選擇<<關機>>,并點擊確定.
- 4.待主機出現關機后(顯示器無顯示),關閉顯示器電源按鈕.
- 5.切斷電腦主機電腦及顯示器電源.

Takeaways

Obtaining devices and data this way poses an
interesting question

Has anything "**wrong**" actually been done **ethically** or **legally**?

FDE and **MDM** are not as certain on **custom hardware**

Supply chains are difficult

Leaks point to sources

E-Waste does not guarantee destruction

Special thanks to...

Thank you
